

# Raindrops, Streams and Rivers Flow.

(Day 1)

## Marble Run fun.

'The rivers flow not past, but through us. Thrilling, tingling, vibrating every fiber and cell of the substance of our bodies, making them glide and sing'. Quote by John Muir.

The average adult human body is 57-60% water!

A baby less than one year old is 75-78% water!

Wow! How important is water?!

These are the materials you will need for today and tomorrow's project:

Draw a dot in the centre of each tube (stream), away from the seams. See red arrows. You don't want your tubes to unravel!

Snip some viewing holes at each dot.

Don't be tempted to cut away the cardboard-it looks like splashes in the 'water'!

Using your imagination and some sticky tape, assemble your tubes to make an interesting network of thinner tubes (streams) which will run into one main tube (river).

Decorate your tubes to look like streams, with vegetation around.

Imagine all the creatures and other forms of life that live around a river?

We've added a leaping fish!

You might find a stapler useful at this stage.

That's quite enough for one day!

Well Done!
