## Oftentimes on a broad meadow near Dunbar.....

Day 4

Make a Wildlife Mobile

Wasp's Nest

These Wasps' Nests attached to the roof inside the shed are very old.

Let's have a look inside?!

Wasps almost never come back to re-use an old nest.

Therefore, it is safe for us to take them down.

There's something else in there!

What is it?!

Wow!

There are lots of different compartments or cells.

This one was never finished. The wasps left it before inhabiting it.

However, it's very wellmade!

It's beautiful!

Perhaps you would like to draw it?

What is it made of?!

Well, its actually been made of bits of our shed!

The wasps have scratched it off, made it into a pulp and shaped it into a nest.

It feels just like thin, papery wood.

Some people don't like Wasps- they say, 'What's the point of Wasps?!'

Wasps do have an important role to play in nature.

They help with Pest Control and help to produce Yeast in a natural process.

Why not do some research?!

Try to find out a bit more about Wasps?!

Perhaps we can learn to feel more friendly towards them.

That's plenty for today!
